Platform - Authentication and electronic signature

It is our authentication and digital signature platform based on the use of electronic certificates guaranteeing the maximum safety level.

Simplifies the development of applications that require the usage of digital certificates, based on their inclusion as a service. Any application can include authentication and digital signature using the services offered by the system, abstracting the applications from problems and technical complexities associated with the usage of digital certificates.

This tool is a response to the growing need of incorporating services for ensuring the security, authenticity and integrity in business transactions, standing out for its easy integration and usage.

Mobile - Electronic signature for mobile phones and tablets

The main electronic signature platforms of market, like Viafirma Platform, allow to provide authentication and electronic signature features to Web and desktop applications they integrate with. In this traditional scenario users access from their computer with web browsers (or desktop applications) to applications provided with digital signature.

However, more and more users are interacting with systems information through mobile devices: smartphones, tablets... that is why electronic signature is needed on mobile devices. The answer lies in the capacity of the Viafirma Mobile ecosystem, composed by Viafirma Platform and a set of electronic signature clients for most of the mobile operating systems and published for free in mobile applications markets.

Inbox - Electronic signatures agenda

Viafirma Inbox allows viewing, electronic signature, validation and custody of all types of documents in electronic form.

This is a Electronic Signatures Agenda which make easier the pending-of-signed document management providing them an approval and signatures workflow.

This web solution that follows the pattern of "e-mail client" organizes the signature agenda thanks to the notification and planning of the documents' expiration date in signing.

Smartcard Reader - Smartcard support on iPhone and iPad

Our Viafirma SmartCard Reader supports the fully electronic ID for iPhone and iPad tablets, capable of both authentication and recognized electronic signature in these devices.

The addition of this electronic ID support on iPhone and iPad, and Android coming soon, will not only help to enhance the electronic signature, but also effectively promote the use of the Spanish electronic ID. With this advance, using the Spanish electronic ID on our smartphone or tablet is as easy as plugging the reader, insert the card and enter the PIN when the application asks us for it.

This is an important worldwide technological advancement, making this Andalusian firm in the first worldwide company which offer such support.
